I & E

Project Proposal:

HOMIES

Harmony in Every Home

Team 4: Abeera, Chloe, Lamia, Qaisar

Overview

1. **Title**
2. **Overview**
3. **Situation & Problem**
4. **Solution & Value Proposition**
5. **Functionalities & Screens**
6. **Customer Acquisition**
7. **Market Study: Users/Customers**
8. **Market Study: Competitors**
9. **Detailed Analysis of Users Behaviour**
10. **Conclusion & Decision**

Situation & Problem

Situation

- **Qaisar**: university student living with 3 roommates, struggles to coordinate household chores in a shared apartment.
- Each roommate has a different schedule, so tasks like cleaning, taking out the trash, or washing dishes often get delayed.
- Occurrence: **Daily / Weekly chores**, recurring issues multiple times per week.

Problem

- **Confusion** over who is responsible for what task.
- Tasks are forgotten or **unevenly distributed**, leading to **frustration** and **tension** among housemates.
- Lack of transparency causes **repeated arguments** and **decreased motivation** to do chores.
- Easier **accessibility** and **modification** than paper based manual working.

Solution

Homie, an application that allows users to:

- Create a shared household space & add members
- Assign tasks with deadlines
- Track completed tasks and contributions
- Send reminders and notifications
- Reassign or request help for chores

Value Proposition

Qualitative

- Makes chore management **simple**
- Provides **organisation & structure**
- **Reduce tension** and **misunderstandings** among housemates
- Creates **peace of mind** with transparent responsibility allocation

Quantitative

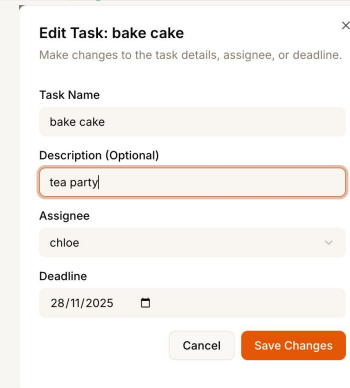

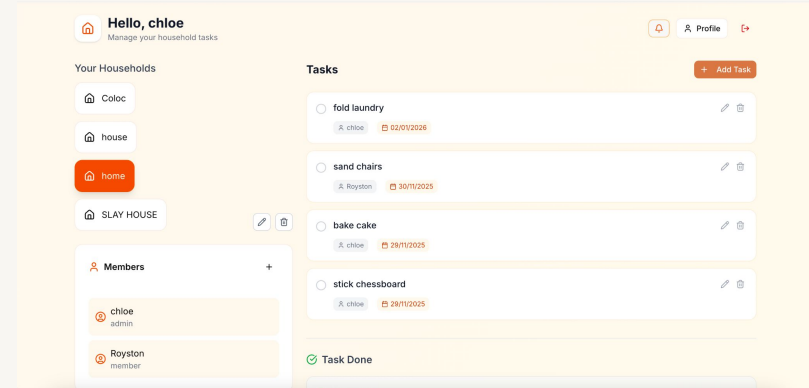

- **Reduce time spent** coordinating chores
- Improve **fairness** in task coordination
- **Reduce** number of **forgotten tasks**
- **Reduce** household **conflicts**

Chloe

Functionalities

- User account creation + login
- Create a household
- Edit name of household
- Leave a household
- Add members
- Create a task
- Add description to task
- Assign task to a household member
- Add a deadline (specific date)
- Mark task as done
- Reassign task

Screens

Customer Acquisition

- **Word of mouth: friends, family**
- **Friends-of-friends**

Accounting & Analysis: How well it worked?

- **Straightforward to convince friends & family to use app: all sharing a common, real problem**
- **Friends-of-friends also were willing to try the app: showing a real demand for an application to solve the defined target problem**

Market Study: Users

External: Public Media

- Households spend ~14–21 hours/week on chores (Insee).
-  People spend 93% more time thinking about chores than doing them, showing high cognitive burden (Samsung Invisible Load Index).
- Shared living (colocation) is increasing, making coordination harder.
- Digital tools for household organization are in rising demand in France.
- 35% of workers feel daily time pressure, worsening chore stress.
- People struggle with remembering tasks, coordinating, and fair sharing.

Internal: Survey Questionnaire

- A large majority of surveyed households (73.7%) reported experiencing conflict.
- Specifically, over 94% of respondents believed an app would be helpful or very helpful for assigning chores, sending reminders, and tracking completion
- 84.2% of users surveyed are willing to pay for or use a premium version of the app

Market Study: Competitors

Qualitative

Feature	Homies (Proposed)	Sweepy	Tody	ChoreCheck
Price	Freemium (€1.99/user)	Freemium	Premium (€6.99 one-time)	Freemium
Assignment	Manual, Reassignment	Yes	Yes	Yes
Comments/Feedback on Task	Yes	No	No	No
Chore Delay/Urgency	Yes	No	No	No
Web App Accessibility	Yes	No (Mobile Only)	No (Mobile Only)	No (Mobile Only)
Target User	Roommates/Students	Homeowners/Families	Homeowners	Roommates/Families

Quantitative

- **75% of competitors lack a web app**, limiting accessibility; HOMIES supports full web & mobile.
- **Competitors mainly target homeowners/families**, while HOMIES focuses on **roommates & students**, a segment of **430,000+ users in France** (growing 12–18% yearly).
- **HOMIES offers more features at a lower cost**, combining assignment, reassignment, and feedback.

Detailed Analysis of User Behaviour

Actions Usage with User Count

action	usage_count	unique_users
DASHBOARD_LOADED	299	30
HOUSE_SELECTED	205	6
HOUSEHOLD_LEAVE_FAILED	85	2
TASK_CREATED	73	17
USER_LOGOUT	71	15

- **Demonstrates which action has the highest unique user count.**
- **30 unique users** have loaded the dashboard a total of 299 times.

Top 6 Users by Action Count

userId	username	total_actions
YcZQJlQMSNPPKZiBAOEEdSaLiGGr2	Muhammad Qaisar	277
dAhN1lzuOscko0g5fzNkWplmrAJ2	Lamia Hossain	218
iaACH6KC8cNKMEewgNdEPIMSrrx1	Ilma	132
uneDJhvN0qU13dLoPzzua2L6y6l1	chloe	96
MkfILDLwQyfyEqyUyG4q4XjCxce2	Sazia Rahman	95
4A6PoQn2CzVM00aNEXlicrRqr352	abeera naeem	64

- **User activity is highly centralized, with the top user**
- **Muhammad Qasar** - highest number of actions (277).

Most Active houses based on Interaction

House Name	House ID	Total Interactions
Binary	669e2c1b-b765-4c59-89ce-ac2d20314f26	66
house	79b7309d-6409-4ce6-b6fe-3b3b6cc906ff	43
Coloc	d8ac7a21-d38b-4c01-81f4-22c8e18a14d4	37
Beach House with Mountain view	fbfbdf5c-5283-45b5-bbd2-5df0d6ae54e8	35
home	569d53cf-7a2e-4539-811c-2268ed79887c	29

- **Demonstrates which house has the most interactions**
- **Binary** is the most active by a significant margin (66 interactions)

Conclusion & Decision

Question	Conclusion
Should we go on with the project or not?	YES, because core problem (chore conflict) is highly relevant, confirmed by 73.7% of users who experienced conflict
Is There Pocket Money?	YES, early revenue is expected. 84.2% of users are willing to pay for or use a premium version
Will this run for 6 months?	FEASIBLE, but requires immediate risk mitigation

Next Step:

- **Prioritize:** Fix critical technical bugs and implement the ability to manage multiple households.
- **Evaluate:** Complete a **6-month** timeline assessment and determine funding streams/expected returns.

2b - Appendix

1. **BMC**
2. **Code + Demo**
3. **Manual Prototype**
4. **Application: Technology**
5. **Users List**
6. **Interviews**
7. **Questionnaires**
8. **Market Study (Users): Sources**
9. **Market Study (Competitor): Sources**
10. **User Feedback & Analysis: Manual Prototype**
11. **User Feedback & Analysis: Application**
12. **Financial Plan**

Key Partners  Strategic alliances (university housing offices, co-living companies, influencers) Potential Integration Partners	Key Activities  Understanding User Needs App development Customer Acquisition Testing & Iteration Platform Maintenance	Value Propositions  Fair and Transparent Chore Distribution Simplified Household Management Increased Accountability Reduced Stress and Conflict	Customer Relationships  Self Service Community Feedback	Customer Segments  Primary Users (Core Target): Students and young professionals in shared apartments, dorms, or co-living spaces. Secondary Users (Expansion): Families needing chore distribution and domestic helpers/cleaning services managing tasks.
	Key Resources  Human Intellectual Physical		Channels  Social Media University Partnerships Community Platforms	
Cost Structure  App Development/UI/UX: Done by project team using free tools/open-source. Hosting/Infrastructure: Cloud Free Tier (Vercel, NeonDB, Firebase). Maintenance/Marketing: Managed by team, no paid ads/costs, organic only. Fees/Admin: Not applicable (no registration, no App Store fees).			Revenue Streams  The main revenue stream is €1.99 micro-fee per premium membership.	

5b - Code & Demo

Implementation Overview

- The prototype interfaces and screens were built using **TypeScript** with a modular structure.
- Each screen is organized into reusable components for easy iteration and future scalability.
- The code reflects the app's core logic at a conceptual level-handling navigation, user input, state updates, and simulated data retrieval.

Code Example (Simplified)

```
64 const [showAddHouse, setShowAddHouse] = useState(false);
65 const [showAddMember, setShowAddMember] = useState(false);
66 const [showAddTask, setShowAddTask] = useState(false);
67
68 // 1. Filter Tasks Logic (Active vs Done)
69 const currentHouseTasks = tasks.filter(t => t.houseId === selectedHouseId);
70 const activeTasks = currentHouseTasks.filter(t => !t.completed);
71 const completedTasks = currentHouseTasks.filter(t => t.completed);
72
73 // Get members for current house
74 const currentHouseMembers = members.filter(m => m.houseId === selectedHouseId);
75
76 return (
77   <div className="max-w-7xl mx-auto p-4 md:p-6">
78     {/* Header Section */}
79     <header className="flex flex-col md:flex-row md:items-center justify-between gap-4 mb-8">
80       <div className="flex items-center gap-3">
81         <div className="p-3 bg-white rounded-xl shadow-sm">
82           <Home className="w-6 h-6 text-orange-600" />
83         </div>
84         <div>
85           <h1 className="text-2xl font-bold text-gray-900">Hello, {userName}</h1>
86           <p className="text-gray-500 text-sm">Manage your household tasks</p>
87         </div>
88       </div>
89
90       <div className="flex items-center gap-3">
91         <AlertDropdown alerts={alerts} onAlertClick={onAlertClick} />
92         <Button variant="outline" onClick={onProfileClick} className="gap-2 bg-white">
```

5c - Manual Prototype

Prototype Structure... contains all main screens of the planned application:

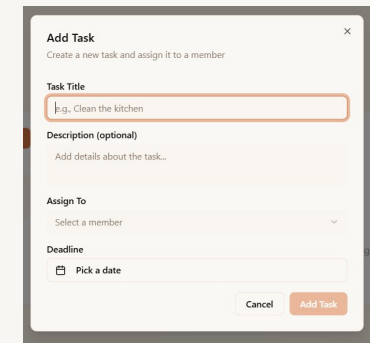

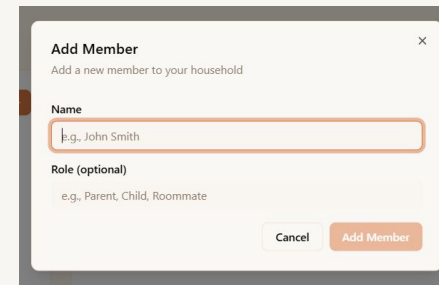

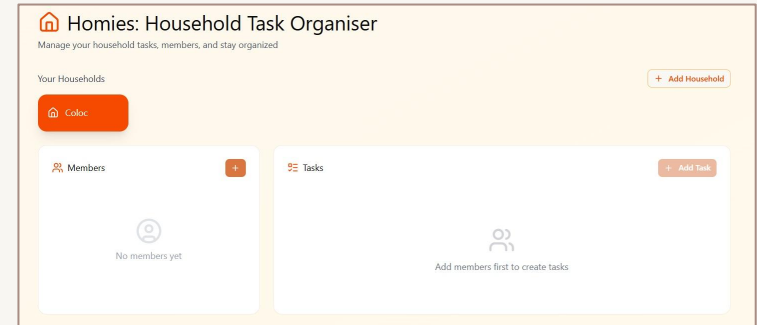

- Onboarding
- Home/dashboard
- Task Assignment workflow
- Tasks details
- Completion and Reminders

These layouts show exactly how a user will move from one step to the next.

How It Works (Concept Flow)

- A household is created
- Members are added to the household
- Tasks are added with deadlines
- Tasks can be reassigned
- Tasks can be checked off

Chloe

5d - Application

Technology Chosen

- **Web application** accessible via browser on desktop or mobile
- To developed using **modern web technologies** (TypeScript + Next.js)
- Focus on **fast, responsive, and collaborative experience**
- Designed to support **real-time updates**, modifications, and user friendly dashboards

Why a Web App?

- Accessible Anywhere
- Cross-Platform
- Easy Updates
- Centralized Data
- Scalable & Future-Ready

6b - Users List

Friends/Flatmates

Link	User Name	House Name
Qaisar	Boudouh, Louis, Qaisar	Coloc 104
Abeera	Raff, Shahzil	Paris House
Lamia	Ilma, Sazia	Binary

Families

Link	User Name	House Name
Abeera	Annie, Huda, Sahrish	Crew
Lamia	Milu, Selina, Fariha	309/2
Chloe	Chloe, Royston	home

Single User

Link	User Name	House Name
Abeera	Abeera	myhouse
Lamia	Osman	Jhigatola - DHK res

7b - Interviews

Before using application:

- Struggling with mental load of having to manually assign tasks to each person - feels like micromanaging
- Need someone to be the “bad guy” to remind to do the chores
- Passive household - nobody takes initiative/responsibility in shared colocation
- Conflicts about chore responsibilities (eg. throwing trash) and tension around household

After 2-weeks of application usage:

- Made visible all tasks assigned to each person - increased mutual appreciation & accountability
- However, still have differing standards regarding if a task is considered complete
- Improved tension among housemates, lessen shirking from assigned responsibilities (but sometimes still undone)

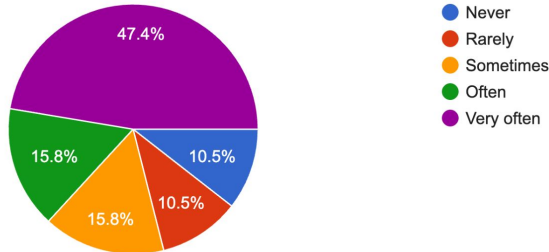

7c - Questionnaire: Questions, Results

Question	Response (Summary)
Who do you currently live with?	Majority live in shared households , confirming relevance for chore coordination.
How often do you experience confusion or conflict about household chores?	Over 70% experience frequent confusion/conflict , showing strong need for a chore-management tool.
Which of the following issues occur most in your household?	Biggest pain points: forgetting, communication problems, and uneven distribution.
Do you currently use any tool to organize household chores?	Most households do not use any system , proving the need for a simple digital solution.
How helpful would an app be for assigning chores, sending reminders, and tracking completion?	Over 94% believe an app would be helpful or very helpful — very strong user demand.
Which features would you find most useful?	Users expect: task assignment, automation, shared calendar, and fairness tracking.
Willingness to Pay for the App (or a Premium Version)	Most users are open to payment depending on value (prefer low-commitment pricing : ads, upgrades, or one-time purchases.)

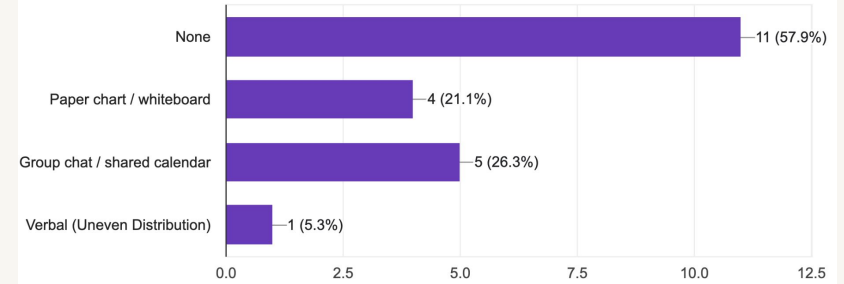

Chloe

7c - Questionnaire: Questions, Results

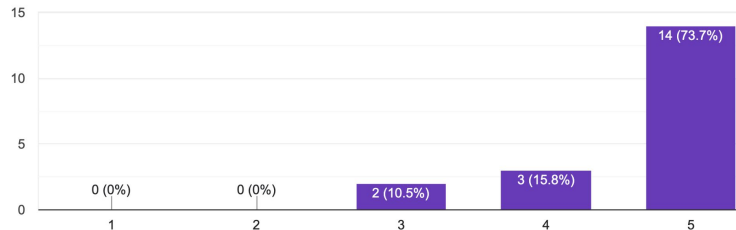

How often do you experience confusion or conflict about household chores?
19 responses

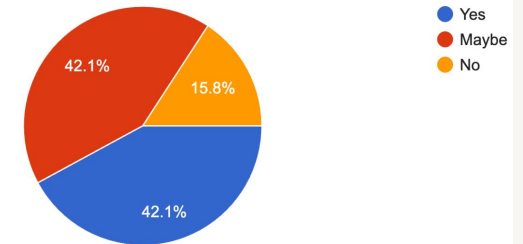

Do you currently use any method or tool to organise household chores?
19 responses

How helpful would it be to have an app that assigns chores, sends reminders, and tracks completion?
19 responses

Would you be willing to pay for such an app (or a premium version)?
19 responses

8b - Market Study (Competitors): Sources

The sources for the competitor analysis included:

- **Direct Use and Testing** of the competitor apps (Sweepy, Tody, ChoreCheck) to understand their features and user flow.
- **Analysis of App Store Reviews** on both iOS and Google Play to gather user pain points and suggestions, which informed the "Nice-to-Have" and premium features of Homies.
- **Reviewing Company Websites and Pricing Pages** to confirm business models (Freemium/Premium) and feature sets.
- **Sweepy** <https://sweepy.com/>
- **Tody** <https://todyapp.com/>
- **ChoreCheck** <https://x.com/chorecheckapp?lang>

9b - User Feedback & Analysis

Manual Prototype

Survey 1

Asked friends & family through Google Forms and informal calls/messages about:

- **Chore distribution difficulties**
- **Feelings of chaos in household**
- **Silent conflicts when chores are forgotten**

Survey 2

Asked potential users about:

- **Would use a simple web app to avoid confusion and conflict**
- **Which features they'd find most useful**

Key Findings:

- **8 interviews with diverse households (Friends: 3, Families: 3, Single: 2)**
- **73.7% experience chore conflict**
- **Over 90% find an app solution helpful**

Feedbacks:

- **Great product for some households; helps to reduce conflict.**
- **Some households prefer not to use a new application.**
- **Good for single persons to track chores, but not necessary for all.**

Thank you for inviting me to use your very useful application. First I would like to say that the idea of making this app is useful as someone who always procrastinate and leave my task till the very last minute or even forgetting to do chores, your app gave me a clear step of documenting what chores I want to do and after finished, the thrill of ticking off every single task. In real world context, I would say it's very useful. However, some improvement I could see is adding visualisation like charts to see a percentage of how much I've done so far. This would give me more motivation to finish everything I need to do!

10:53 PM

I found the app very easy to use. Since I hadn't tried any similar apps before, I used to verbally assign and distribute all the household work, which caused significant chaos in my family (my husband, daughter, and I). I feel that this app is pretty game-changing for us.

11:35 AM

9c - User Feedback & Analysis

Application

Team

External

- Evens out contribution of each household member (improved fairness)
- Visual task allocation reduces conflict over uneven workload
- Reduce awkwardness in task allocation & assignment
- Reduce forgetfulness regarding chores
- Simple & intuitive interface for task tracking

Positive Feedback:

- Interactive and easy to use
- Useful app idea for procrastinators and in a real-world context
- Ease household chores distribution to some extent

Areas for Improvement:

- Suggest adding a confirmation popup before task removal.
- Setting up a reminder system

Financial Plan

Year 1: Development & Launch

Labor Cost: €0

Tech Stack: €0

Marketing: €0

- Social media, university campaigns

Server: €0 - €9.99/year

Years 2-3: Scaling

Server Scaling: €0 - €100

- Upgrading to bigger server

Deployment (App Store, Google Play):

- App Store Fees: Apple €99/yr

Free Plan: Basic Features

- Includes all Basic Features

One-time Payment: Premium Features

- Adding more than X people
