

I & E

Project Proposal:

HOMIES

Harmony in Every Home

Team 4: Abeera, Chloe, Lamia, Qaisar

Overview

1. Situation & Problem
2. BMC: Revenue Streams, Prices
3. Solution & Value Proposition
4. Functionalities & Screens
5. Code & Demo
6. Manual Prototype
7. Application: Technology & Tests
8. Customers: Acquisition & Retention
9. Users List
10. Market Study (Users & Customers)

11. Interviews
12. Questionnaire
13. Market Study (Users & Customers): Sources
14. Market Study (Competitors)
15. Market Study (Competitors): Sources
16. Detailed Analysis of User Behaviour
17. User Feedback & Analysis: Manual Prototype
18. User Feedback & Analysis: Application
19. Financial Plan
20. Conclusion
21. Presentation Responsibility

Situation & Problem

Situation

- **Qaisar**: university student living with 3 roommates, struggles to coordinate household chores in a shared apartment.
- Each roommate has a different schedule, so tasks like cleaning, taking out the trash, or washing dishes often get delayed.
- Occurrence: **Daily / Weekly chores**, recurring issues multiple times per week.

Problem

- **Confusion** over who is responsible for what task.
- Tasks are forgotten or **unevenly distributed**, leading to **frustration** and **tension** among housemates.
- Lack of transparency causes **repeated arguments** and **decreased motivation** to do chores.

Solution

Homie, an application that allows users to:

- Create a shared household space & add members
- Assign tasks with deadlines
- Track completed tasks and contributions
- Send reminders and notifications
- Reassign or request help for chores

Value Proposition

Qualitative:

- Creates **peace of mind** with transparent responsibility allocation
- **Reduce tension** and **misunderstandings** among housemates
- Provides a sense of **organisation & structure**
- Makes chore management **simple**

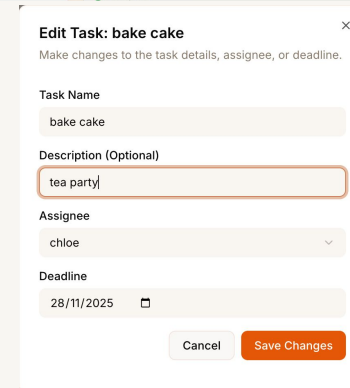

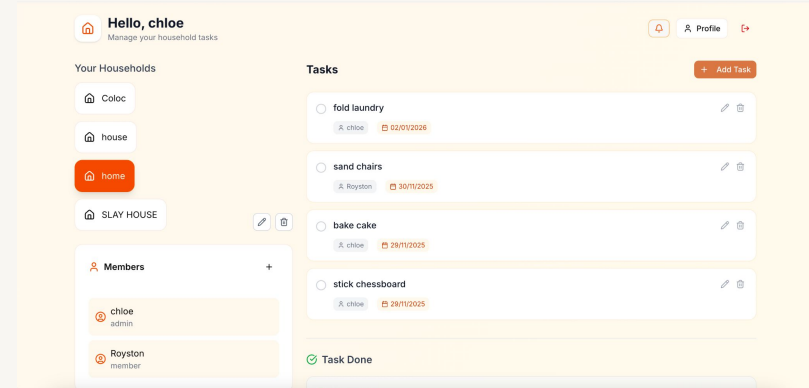

Qualitative:

- **Reduce time spent** coordinating chores
- Improve **fairness** in task coordination
- **Reduce** household **conflicts**
- **Reduce** number of **forgotten tasks**

Functionalities

- User account creation + login
- Create a household space
- Edit name of household
- Leave a household
- Add members
- Create a task
- Add description to task
- Assign task to a household member
- Add a deadline (specific date)
- Mark task as done
- Reassign task

Screens

Customer Acquisition & Retention

Customer Acquisition

- Shareable link to join the application
- Social media presence
- Onboarding tutorial
- Referral system (future)

Retention Strategy (for future???)

- Reminder notifications through email
- Email reminders for overdue tasks
- Comments under tasks (can use description field)
- Weekly summary delivered by email (optional)
- Household stats

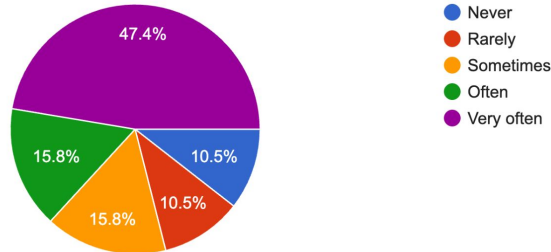

Accounting & Analysis

- Monthly Active Users
- Monthly Active Households
- New accounts created per week
- Retention after 1 month, 3 months
- How many users stop using the website
- Bug reports & feedback form responses

Market Study: Users

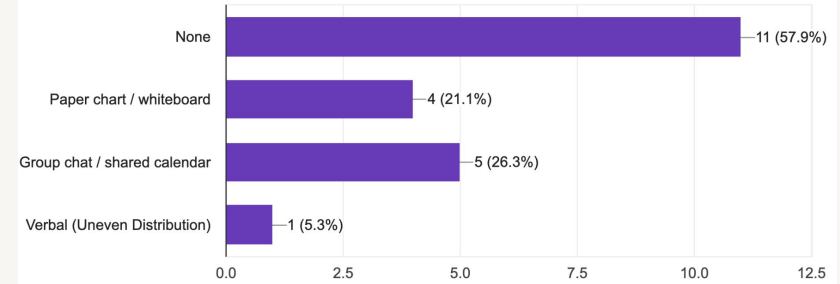

How often do you experience confusion or conflict about household chores?

19 responses

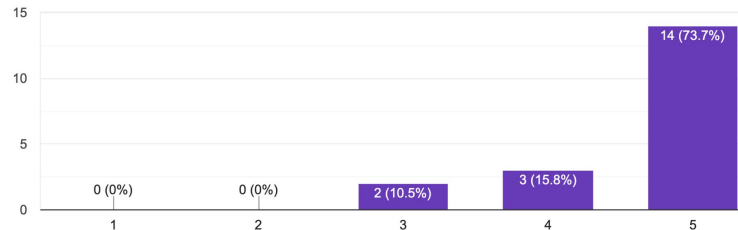

Do you currently use any method or tool to organise household chores?

19 responses

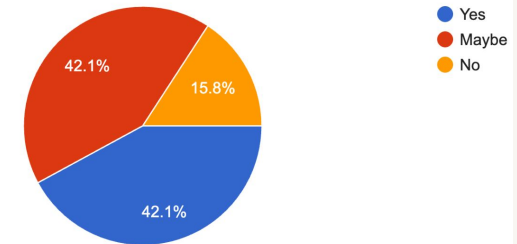

How helpful would it be to have an app that assigns chores, sends reminders, and tracks completion?

19 responses

Would you be willing to pay for such an app (or a premium version)?

19 responses

Market Study (Competitors)

Qualitative

Feature	Homies (Proposed)	Sweepy	Tody	ChoreCheck
Price	Freemium (€1.99/user)	Freemium	Premium (€6.99 one-time)	Freemium
Assignment	Manual, Reassignment	Yes	Yes	Yes
Comments/Feedback on Task	Yes	No	No	No
Chore Delay/Urgency	Yes	No	No	No
Web App Accessibility	Yes	No (Mobile Only)	No (Mobile Only)	No (Mobile Only)
Target User	Roommates/Students	Homeowners/Families	Homeowners	Roommates/Families

Quantitative

- **73.7%** experience conflict over chores
- **Over 94%** find an app solution helpful.
- **84.2%** are willing to pay (Yes + Maybe).

Detailed Analysis of User Behaviour: LOGGG

QAISAR → query DB → SS

Conclusion & Decision

2b - Appendix

1. **BMC**
2. **Code + Demo**
3. **Manual Prototype**
4. **Application: Technology**
5. **Users List**
6. **Interviews**
7. **Questionnaires**
8. **Market Study (Users): Sources**
9. **Market Study (Competitor): Sources**
10. **User Feedback & Analysis: Manual Prototype**
11. **User Feedback & Analysis: Application**
12. **Financial Plan**

4b - BMC

Key Partners  Strategic alliances (university housing offices, co-living companies, influencers) Potential Integration Partners	Key Activities  Understanding User Needs App development Customer Acquisition Testing & Iteration Platform Maintenance	Value Propositions  Fair and Transparent Chore Distribution Simplified Household Management Increased Accountability Reduced Stress and Conflict	Customer Relationships  Self Service Community Feedback	Customer Segments  Primary Users (Core Target): Students and young professionals in shared apartments, dorms, or co-living spaces. Secondary Users (Expansion): Families needing chore distribution and domestic helpers/cleaning services managing tasks.
	Key Resources  Human Intellectual Physical		Channels  Social Media University Partnerships Community Platforms	
Cost Structure  App Development/UI/UX: Done by project team using free tools/open-source. Hosting/Infrastructure: Cloud Free Tier (Vercel, NeonDB, Firebase). Maintenance/Marketing: Managed by team, no paid ads/costs, organic only. Fees/Admin: Not applicable (no registration, no App Store fees).			Revenue Streams  The main revenue stream is €1.99 micro-fee per premium membership.	

5b - Code & Demo

Implementation Overview

- The prototype interfaces and screens were built using **TypeScript** with a modular structure.
- Each screen is organized into reusable components for easy iteration and future scalability.
- The code reflects the app's core logic at a conceptual level-handling navigation, user input, state updates, and simulated data retrieval.

Code Example (Simplified)

```
64 const [showAddHouse, setShowAddHouse] = useState(false);
65 const [showAddMember, setShowAddMember] = useState(false);
66 const [showAddTask, setShowAddTask] = useState(false);
67
68 // 1. Filter Tasks Logic (Active vs Done)
69 const currentHouseTasks = tasks.filter(t => t.houseId === selectedHouseId);
70 const activeTasks = currentHouseTasks.filter(t => !t.completed);
71 const completedTasks = currentHouseTasks.filter(t => t.completed);
72
73 // Get members for current house
74 const currentHouseMembers = members.filter(m => m.houseId === selectedHouseId);
75
76 return (
77   <div className="max-w-7xl mx-auto p-4 md:p-6">
78     {/* Header Section */}
79     <header className="flex flex-col md:flex-row md:items-center justify-between gap-4 mb-8">
80       <div className="flex items-center gap-3">
81         <div className="p-3 bg-white rounded-xl shadow-sm">
82           <Home className="w-6 h-6 text-orange-600" />
83         </div>
84         <div>
85           <h1 className="text-2xl font-bold text-gray-900">Hello, {userName}</h1>
86           <p className="text-gray-500 text-sm">Manage your household tasks</p>
87         </div>
88       </div>
89
90       <div className="flex items-center gap-3">
91         <AlertDropdown alerts={alerts} onAlertClick={onAlertClick} />
92         <Button variant="outline" onClick={onProfileClick} className="gap-2 bg-white">
```

5c - Manual Prototype

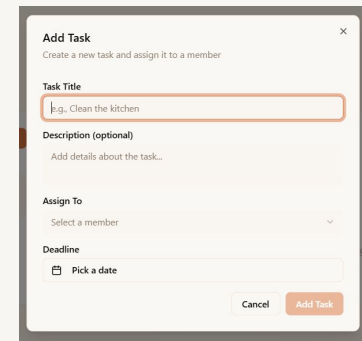

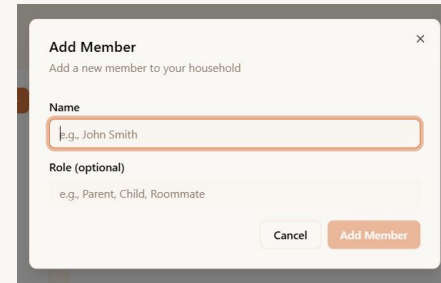

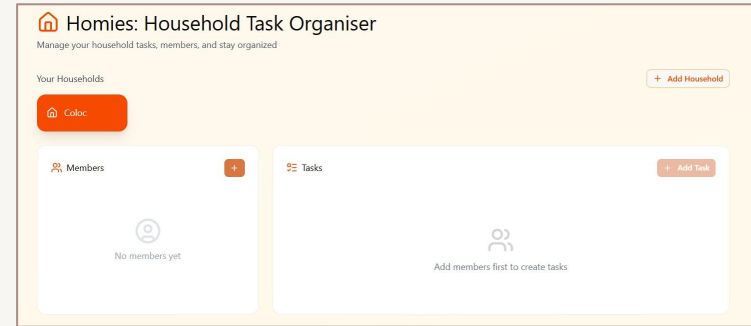

Prototype Structure... contains all main screens of the planned application:

- Onboarding
- Home/dashboard
- Task Assignment workflow
- Tasks details
- Completion and Reminders

These layouts show exactly how a user will move from one step to the next.

How It Works (Concept Flow)

- A household is created
- Members are added to the household
- Tasks are added with deadlines
- Tasks can be reassigned
- Tasks can be checked off

5d - Application

Technology Chosen

- **Web application** accessible via browser on desktop or mobile
- To developed using **modern web technologies** (TypeScript + Next.js)
- Focus on **fast, responsive, and collaborative experience**
- Designed to support **real-time updates**, modifications, and user friendly dashboards

Why a Web App?

- Accessible Anywhere
- Cross-Platform
- Easy Updates
- Centralized Data
- Scalable & Future-Ready

Why a Web App? (can use for script)

Accessible Anywhere: Works on desktops, laptops, tablets, and mobile browsers hence no installation is needed.

Cross-Platform: All household members can access the app regardless of device type.

Easy Updates: New features or bug fixes are instantly available to all users.

Centralized Data: All tasks, logs, and notifications are synced in real time for everyone.

Scalable & Future-Ready: Can later add features without major changes.

6b - Users List (if we add by individual household)

Royston	
Osman	
Shamima	
Habiba	
Ilma	
Selina	

7b - Interviews

- 7 interviews with diverse household compositions
- Couples: 1 | Roommates: 2 | Families: 1 | Co-workers: 1 | Single: 1
- Explored existing routines, pain points, motivations, and tool usage
- Key finding: 71.4% experienced conflict over chores

The app solve my problem so much because as someone who struggle with adhd. He gives me motivation to do the task diligently

I found the app very easy to use. Since I hadn't tried any similar apps before, I used to verbally assign and distribute all the household work, which caused significant chaos in my family (my husband, daughter, and I). I feel that this app is pretty game-changing for us.

11:35 AM

Hello thanks for this app, I really like it because it has made my chore distribution very easy, I can assign tasks at any time and keep a track without losing the information.

Also I don't have enough phone storage to use app version so feasible to anytime do it in the browser.

Thanks for the web version.

Edited 11:28 AM

Since I am currently staying alone at home, all the chores need to be done by myself. Therefore, the application is not used for chore distribution in my case. However, it effectively tracks which tasks have been completed and which have not. This keeps me organized and provides assurance that I am not missing anything.0

7c - Questionnaire: Questions, Results

Question	Response (Summary)
Who do you currently live with?	Majority live in shared households , confirming relevance for chore coordination.
How often do you experience confusion or conflict about household chores?	Over 70% experience frequent confusion/conflict , showing strong need for a chore-management tool.
Which of the following issues occur most in your household?	Biggest pain points: forgetting, communication problems, and uneven distribution.
Do you currently use any tool to organize household chores?	Most households do not use any system , proving the need for a simple digital solution.
How helpful would an app be for assigning chores, sending reminders, and tracking completion?	Over 94% believe an app would be helpful or very helpful — very strong user demand.
Which features would you find most useful?	Users expect: task assignment, automation, shared calendar, and fairness tracking.
Willingness to Pay for the App (or a Premium Version)	Most users are open to payment depending on value (prefer low-commitment pricing : ads, upgrades, or one-time purchases.)

7d - Market Study (Users & Customers): Sources

1. **Interviews:** Our team conducted **some interviews** with different household compositions, including couples, roommates, families, and coworkers. The interviews helped understand existing routines, pain points, motivations, and the use of current organization tools.
2. **Questionnaire:** A total of **19 people** participated in a questionnaire. The key findings were that the respondents :
 - live with 2 to 3 other people.
 - feel the need for an efficient chore organization system.
 - have already experienced conflict over chores.
 - agreed that this app can be a good solution for their problem

8b - Market Study (Competitors): Sources

The sources for the competitor analysis included:

- **Direct Use and Testing** of the competitor apps (Sweepy, Tody, ChoreCheck) to understand their features and user flow.
- **Analysis of App Store Reviews** on both iOS and Google Play to gather user pain points and suggestions, which informed the "Nice-to-Have" and premium features of Homies.
- **Reviewing Company Websites and Pricing Pages** to confirm business models (Freemium/Premium) and feature sets.

9b - User Feedback & Analysis

Manual Prototype

1. Google sign in is not working
2. It will be helpful if user can see a confirmation popup before removing the task
3. Done task should not be crossed. It seems like the task is cancelled
4. I can see profile section twice on the home page. It will be good if the profile section appears once on the home.
6. When I am on home page and press back button , the login page shows . And when I press back again in that state, the home page shows again
7. When I go back to the site again , all the notifications are gone.

- Could we get a feature to track expenses and budget for household items?
- It would be helpful if we could customize the app to fit our specific household needs!

10:18 PM

Thank you for inviting me to use your very useful application. First I would like to say that the idea of making this app is useful as someone who always procrastinate and leave my task till the very last minute or even forgetting to do chores, your app gave me a clear step of documenting what chores I want to do and after finished, the thrill of ticking off every single task. In real world context, I would say it's very useful. However, some improvement I could see is adding visualisation like charts to see a percentage of how much I've done so far. This would give me more motivation to finish everything I need to do!

10:53 PM

Here's my feedback after testing the app:

I really liked how intuitive and easy to use it is and the overall experience is smooth and efficient!! However, one thing felt limiting it's the fact that a task can only be assigned to one person at a time.

In group situations (like roommates or larger teams), some tasks need to be prepared or handled by several people together before being split into individual responsibilities. It would be much more practical if a single task could be assigned to multiple users.

Right now, the only workaround is to create the same task several times and assign it separately to each person, which is repetitive and not very convenient. Adding a "multi-assignee" option for tasks would make the app more flexible and better suited for larger groups.

6:21 PM

9c - User Feedback & Analysis

Application

Team

- Simple & intuitive interface for task tracking
- Evens out contribution of each household member (improved fairness)
- Visual indication of task allocation to each household member - reduced conflict/arguments about uneven workload
- Reduce awkwardness in task allocation & assignment
- Reduce forgetfulness regarding chores

External

10b - Financial Plan
